# **Job Portal**

**By**

**Akshay Bhandari (CE009) - 18CEUOF051  
Darshan Bhuva (CE016) - 18CEUOS050**

**B.Tech CE Semester-VI  
Subject: System Design Practice**

**Guided by:**

Prof. Malay S. Bhatt  
Associate Professor  
Dept. of Comp. Engg.

**Faculty of Technology  
Department of Computer Engineering  
Dharmsinh Desai University**

**Faculty of Technology  
Department of Computer Engineering  
Dharmsinh Desai University**

## **CERTIFICATE**

This is to certify that the practical / term work carried out in the subject of  
**System Design Practice** and recorded in this journal is the  
bonafide work of

**Akshay Harikrushnbhai Bhanderi (CE009) , Student ID No: 18CEUOF051  
Darshan Viththalbhai Bhuva (CE016),Student ID No:18CEUOS050**

of B.Tech semester **VI** in branch of **Computer Engineering**  
during academic year 2020-2021

Prof. Malay S. Bhatt  
Associate Professor  
Department of Computer Engineering,  
Faculty of Technology,  
Dharmsinh Desai University, Nadiad

Dr. C.K Bhensdadia  
Prof. and Head,

## 1. Abstract

Finding jobs that best suits the interests and skill set is quite a challenging task for the job seekers. The difficulties arise from not having proper knowledge on the organization's objective, their work culture and current job openings. In addition, finding the right candidate with desired qualifications to fill their current job openings is an important task for the recruiters of any organization. Online Job Portals have certainly made job seeking convenient on both sides. Job Portal is the solution where recruiters as well as the job seeker meet aiming at fulfilling their individual requirement. They are the cheapest as well as the fastest source of communication reaching a wide range of audience on just a single click irrespective of their geographical distance. The web application "Job Portal" provides an easy and convenient search application for the job seekers to find their desired jobs and for the recruiters to find the right candidate. Job seekers from any background can search for the current job openings. Job seekers can register with the application and update their details and skill set. They can search for available jobs and apply to their desired positions. Employers can register with the application and post their current openings. They can view the Job applicants by searching resume attributes. Employers and Employees can review each other which can be useful to other users.

## 2. Introduction

The existing system for job recruitment includes traditional methods like Employment agencies, advertising through newspapers, televisions and radios, college fairs etc. which are too slow and stressful. With the advancement of the internet, jobseekers rely on the online job portals, which makes the job search efficient. Jobseekers had to go to organizations to apply for jobs which is stressful, time consuming and very challenging. Considering that we have developed this system which helps those a lot. The system is portable, time efficient and cost efficient. Online Job Portal acts as a bridge of communication between organizations and applicants. With the evolution of technology and the internet being the main source of information for the applicants, these job portals have become an excellent method to reach a wide range of audience.

### **Technology Used for Development(Version)**

- Operating System:  
Windows 10
- IDE for Development:

## VS Code

- Front End:  
Angular  
CSS  
HTML  
JavaScript
- Back End:  
NodeJS
- Database:  
MongoDB
- Web Browser Version:  
Chrome Browser : Version 89.0.4389.82 (Official Build) (64-bit)  
Mozilla Firefox Browser : Version 89.0.4389.82 (Official Build) (64-bit)

## 3. Software Requirement Specifications

### 3.1 Job Seeker

#### 3.1.1 Registration

Jobseeker if wants to register to the site, a click on Register Now button will provide him with a registration form. After filling all the details in the registration form i.e., the mandatory ones which are marked by \* has to be filled necessarily and the remaining may be left, the user has to submit it by clicking on the submit button. Notification via message will be displayed.

**Input:** User information required for registration.

**Processing:** User details will be stored in the database after verification of the details. **Output:** Upon successful registration, the user will be redirected to the home page of the application. Else appropriate error messages will be shown.

### 3.1.2. Login

It allows only authorized people to access the application. When the user logs in to the system, the user has to enter login details in the specific username and password fields. The user clicks on the login button and if id and password are validated, then the user is given access to the application and user profile is displayed.

Precondition: User must be already registered.

Input: User credentials to log in

Processing: Verifying the credentials.

Output: Upon successful login, the user will be redirected to the home page of the application. Else appropriate error message will be shown

### 3.1.3 Forgot Password

If the user forgets the password, it can be retrieved by Option Forgot Password? Button. A click on this button will lead to a security question and if the answer is verified. The message with the correct password will be provided to the user.

Input: Answer following question.

Processing: Verifying the credentials.

Output: Upon successful answer, the user will be redirected to the change password page. Else appropriate error message will be shown

### 3.1.4 Search Jobs

The jobseeker can search for the required job by entering keywords, category, work status, location, qualification, categories, company, location, experience in the provided fields. A click on search button will display the result of all the jobs matching the job seeker's specification.

Input: Enter search credentials.

Processing: Fetch database based on search.

Output: List of jobs will be shown. If there are no jobs then “No match found” error message will be shown.

### 3.1.5 Create CV(Resume), Edit, Hide and Delete

As stated above, a jobseeker has the option to create his CV. CV or Upload own created CV. If the user clicks on create CV Option, a template is provided to the user in which the user has to fill all his details. After filling all the details and clicking on the submit button, the resume is posted to the site. Edit, Hide and Delete Resume options provided with Create CV lets jobseeker with some additional facilities for the resume which has been posted to the site. A click on Edit CV button helps the job seeker to do some amendments in the already created CV and then again submit it. A click on Hide CV option will let the jobseeker hide his CV. The user has to enter in the particular field the name of the companies and then click on the hide button. Delete CV option will let the jobseeker his added or created CV from the site itself.

Create:

Input: Details for CV

Processing: Creating CV

Output: “Created successfully ” message will be shown.

Edit:

Input: change fields Which want to update.

Processing: Updating CV.

Output: “Updated successfully ” message will be shown.

Hide:

Input: click hide button.

Output: “Hide successfully ” message will be shown.

Delete:

Input: click delete button.

Processing: Deleting CV.

Output: “Deleted successfully ” message will be shown.

### 6.1.6 Save Jobs

As a jobseeker receives daily notifications of jobs that match their keywords via job agent. The user can save jobs that interest them but do not want to apply at that particular point of time. A Click on Save Job button will put all the details of that job in the queue and the candidate can apply for it later on from the list.

Input: click save button.

Processing: Updating job queue of user.

Output: “Job saved” message will be shown.

### 3.1.7 Arrange Job Search

As the jobseeker searches for a particular job and Saves Results it. He has the ability to arrange job search results When all the search results are with the user a click on date or location button allows the user to collect results by date or location.

Input: Search parameter

Output: Related jobs

### 3.1.8 Apply for a Job

Jobseeker applies to a particular company after submitting the resume and the required details. A notification to apply for a particular job according to his requirements is sent to the jobseeker.

Input: Upload CV and other required details.

Processing: Details sent to the Employe.

Output: If user is valid for job a notification to apply sent to user.

### 3.1.9 Provide Rating

A job seeker can provide ratings for the employers or companies under which he has worked already which will reflect on the profile of Job Providers.

Precondition: user must be employed for that job.

Input: rating for job.

Output: Rating updated based on all users ratings.

### 3.1.10 Provide Introduction Video

A Jobseeker can upload his introduction video which comprises basic details and achievements he has gained.

Input: upload video.

Output: “Video uploaded successfully” message will be shown.

### 3.1.11 Contact us

A jobseeker can contact the system administrator by filling up the form.

Input: click contact us button.

Output: user will be redirected to contact us page.

## 3.2 Employer

### 3.2.1 Registration

For Employer registration to the site, a click on Register Now button will provide him with a registration form. After filling all the details in the registration form i.e. the mandatory ones which are marked by \* has to be filled necessarily and the remaining may be left, the user has to submit it by clicking on the submit button.

Input: User information required for registration.

Processing: User details will be stored in the database after verification of the details. Output: Upon successful registration, the user will be redirected to the home page of the application. Else appropriate error messages will be shown.

### 3.2.2 Login

It allows only authorised people to access the system. When the user logs in to the system, the user has to enter login details in the specific username and password fields. The user clicks on the login button and if id and password are validated, then the user is given access to the application and user profile is displayed.

Precondition: User must be already registered.

Input: User credentials to log in

Processing: Verifying the credentials.

Output: Upon successful login, the user will be redirected to the home page of the application. Else appropriate error message will be shown

### 3.2.3 Forgot Password

If the user forgets the password, it can be retrieved by Option Forgot Password? Button. A click on this button will lead to a security question and if the answer is verified. The message with the correct password will be provided to the user.

Input: Answer following question.

Processing: Verifying the credentials.

Output: Upon successful answer, the user will be redirected to the change password page. Else appropriate error message will be shown

### 3.2.4 Search Resume

The Employer can search for the required job by entering keywords, category, job category, days since posted in the provided fields. A click on search button will display the result of all the resumes matching the employer's specification.

Input: Enter valid details for search.

Processing: Fetching valid Resume.

Output: List of resumes will be shown.

### 3.2.5 Add a New Job

Employer collects the vacancy details and has the authority to Post jobs. A particular is posted by filling a detailed job description such as job title, company name, location, salary, job type, work type, description required skills etc. in the required fields. If a click on the Add Job button is made, advertisement for the new job will be posted on the website.

Input: Enter all job details.

Processing: Updating database.

Output: after successfully creating a job “Job created” message will be shown.

### 3.2.6 Information on number of vacancy options

The Employer when sees different applications, an option is to view the number of vacancies viewed as viewings available with the employer. Employer can manage the number of vacancies.

Input: Current vacancy number.

Output: Vacancy number will be updated.

### 3..2.7 Search, View or Download Resume

Employers can Search Resumes for a particular job by filtering criteria and filling all the required fields. As the employer clicks on Search Button, all the Resumes within the criteria are displayed. After Secching,

Employer now has the option to View or Download Resume. A click on any option will let him view and check the resume.

Input: Button click on view/Download resume.

Output: Resume Will be downloaded

### 3.1.8 Provide Rating

A job employer can provide ratings for the employees who have been hired by him and it will reflect on the profile of Job Seekers.

Input:Rating for employee.

Output:Rating will be affected to the overall rating of that employee.

### 3.2.9 Contact us

A Job provider can contact the system administrator by filling up the form .

Input:Issue or queries related to the system.

Output:'Your suggestion is successfully submitted" message will be shown.

## 3.3 Administrator

### 3.3.1 Manage jobseeker and the employer module

Admin has the responsibility to manage jobseeker as well as the employer modules. This includes managing their account, usernames and passwords etc.

View:

Input: View button will be clicked.

Output:User can see details.

Edit:

Input: Edit button clicked and updated credentials.

Output: “Edited successfully” message will be shown.

Delete:

Input : Delete button clicked.

Output:”Deleted successfully” message will be shown.

### 3.3.2 Manage Job Module

Admin can manage the jobs that are posted by job providers.

Add:

Input:Details related to the new job will be passed.

Output:’Job successfully added to the system’ message will be shown.

View:

Input:’View Job’ button will be clicked.

Output:Details of the job will be rendered.

Delete:

Input:’Delete Job’ button will be clicked.

Output:The job will be deleted from the system.

Edit:

Input:Updated data will be passed.

Output:’Job updated successfully’ message will be passed.

### 3.3.3 Send Notification messages to employer and jobseeker

Whenever any user subscribes to the site as an employer or jobseeker, the admin will have to send them notification messages confirming their subscription.

Input: Notification credentials will be passed.

Output:Notification will be sent.

### 3.3.4 Provide roles and authentication to users

The administrator provides usernames and passwords to the users and also the admin has the duty to make users of the website as an employer or jobseeker depending on the type of registration made by the user.

Input: Command to manage authentication of users in the system.

Output: 'Successful' message will be shown.

### 3.3.5 Manage FAQs

Admin can manage the frequently asked questions as per current time.

Create:

Input: New FAQ.

Output: "Added successfully"

Delete:

Input: Delete Button clicked.

Output: "Deleted successfully"

Edit:

Input: Updated credentials are passed.

Output: "Updated successfully".

## 3.4 Other Nonfunctional Requirements

### 3.4.1 Performance Requirements

Server must not crash in case of too many simultaneous users working on the application. The delay time to load and reload pages should be as low as possible. Database access time should be as little as possible.

### 3.4.2 Safety Requirements

Safety of database is maintained. Concurrent requests for manipulation of data must be managed such that data integrity is maintained. A prompt should ask for the confirmation before every non symmetric action where data once changed or deleted cannot be restored.

### 3.4.3 Security Requirements

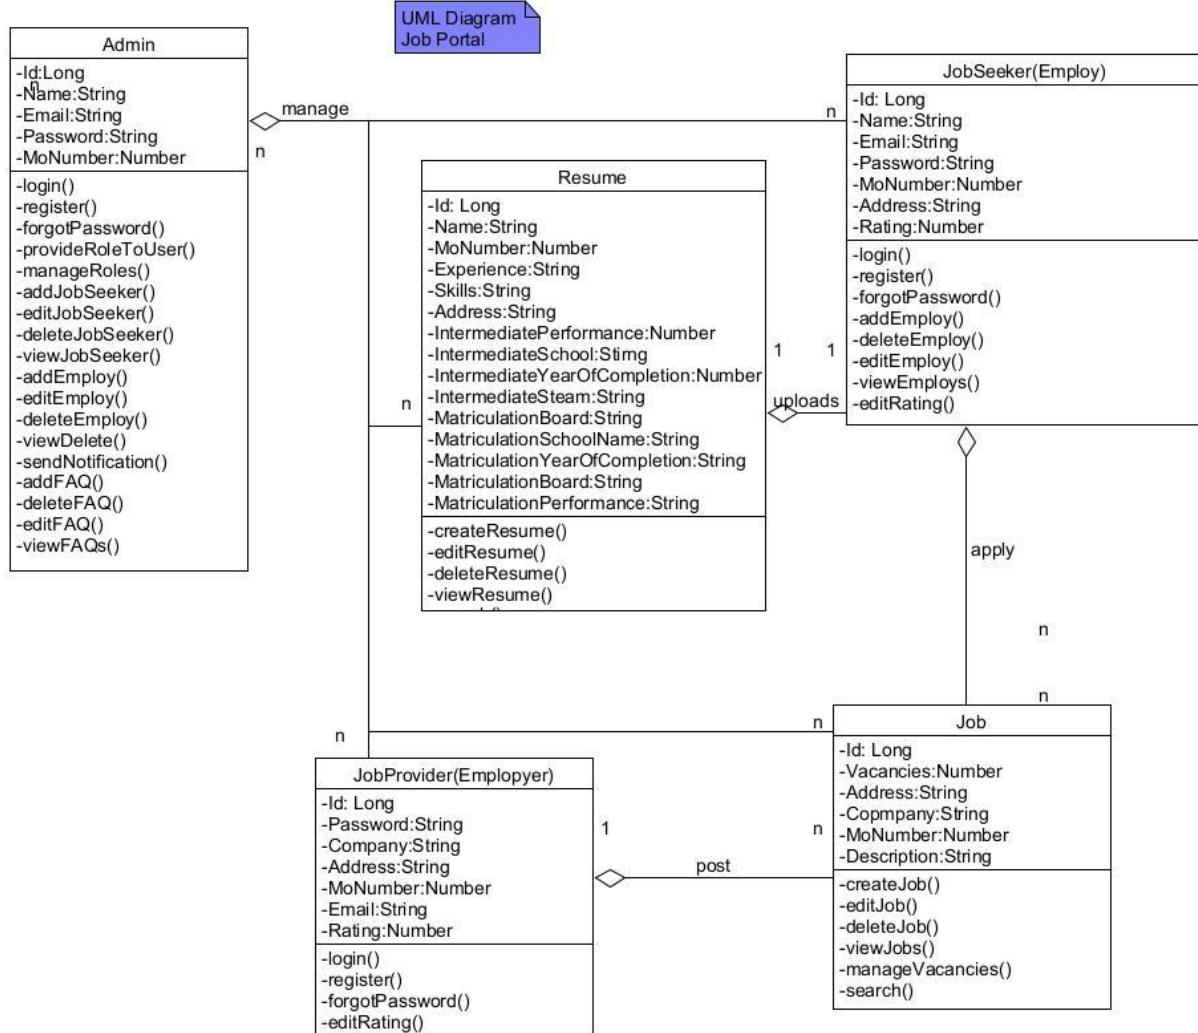

User data must be secured in the database. Unauthorized access should not be allowed. One user cannot view other user's details.

### 3.4.4 Software Quality Attributes

The project must be compatible with most of the browsers like Firefox, Chrome, Microsoft edge etc. The application must be available 24\*7. The application should be easy to maintain and upgrade from time to time.

## 5. Implementation Detail

### Modules created and a brief description of each module.

The Online Job Search Portal is a web-based application, which revolutionizes the way companies hire the candidates and jobseekers search for job vacancies. The employers can view ratings given by the jobseekers and make improvements in their system accordingly. The modules that are implemented in the Online Job Portal are as listed.

Admin  
Employer  
Jobseeker

#### 5.1 Admin

The Admin module provides various functionalities to the admin of the system. The Admin users are responsible for managing the whole system. Admin can manage all the three modules of the system: Employer, Job seeker and Job.

#### 5.2 Employer

Employer users will be able to perform functions such as registering with the application and creating an account by providing required credentials that are stored in the Employer table of MongoDB database. Once the account is created, this module allows employers to post jobs by providing credentials for jobs which are saved in the Job tabel. Employer can manage jobs which are posted by him.

#### 5.3 Jobseeker

The Jobseeker users will be able to perform functions such as registering with the application by providing required credentials that are stored in the Jobseeker table of MongoDB. Once the account is created, jobseekers can search, view and apply for active job openings.

## 5.4 Job

The job module is all about job related data. Job provider can manage jobs that are posted by himself. Also, Admin can manage job module.

## 6. Testing

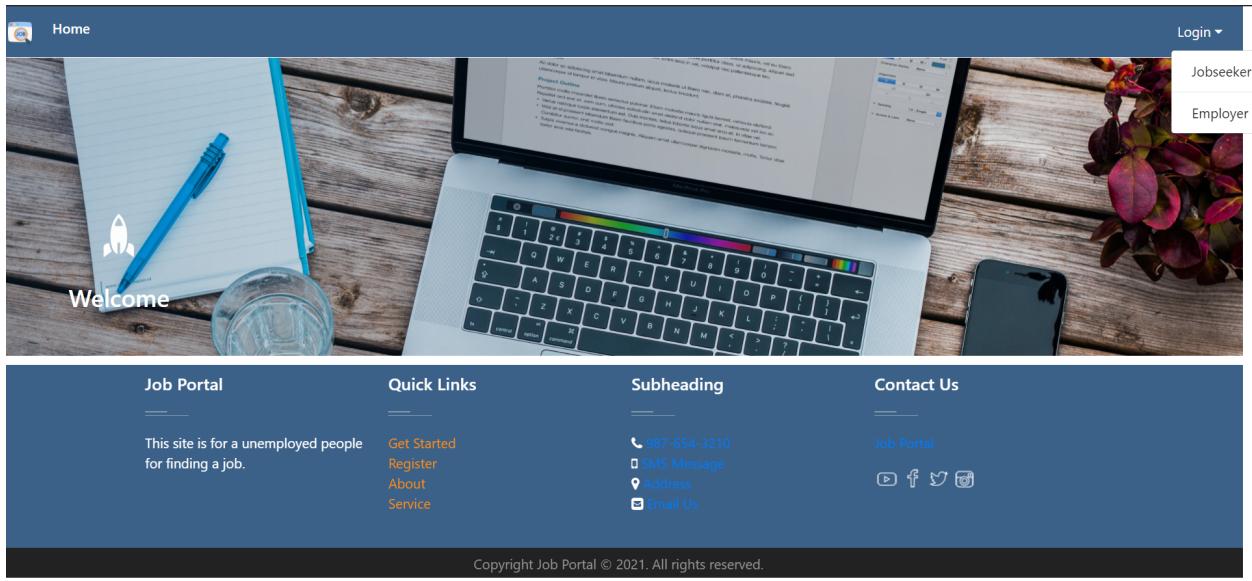

Seq No.	Test Case Description	Expected Result	Tested by	Date Tested	Test Case Status
<b>Login &amp; Register</b>					
1	Key-in valid login credentials ,trying to login as <b>admin</b>	Send notification through mail & acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
2	Key-in invalid login credentials ,trying to login as <b>admin</b>	Display error message & send notification through mail	Akshay Bhanderi	25/02/2021	Passed
3	Key-in valid credentials, trying to register as <b>Jobseeker/Jobprovider</b>	Send notification through mail & acknowledgement message & navigate to login page	Akshay Bhanderi	25/02/2021	Passed
4	Key-in invalid credentials and try to register as <b>Jobseeker /Job provider</b>	Display error message	Akshay Bhanderi	25/02/2021	Passed
5	Key-in Correct login credentials of <b>Job Seeker/Jobprovider</b>	Send notification through mail & Display Home Page of <b>Job Seeker/Job Provider</b>	Akshay Bhanderi	25/02/2021	Passed
6	Key-in incorrect login credentials of <b>Job Seeker/Jobprovider</b>	Error message	Akshay Bhanderi	25/02/2021	Passed
7	Key-in forgot password then valid credentials by <b>Jobprovider/Jobseeker</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
8	Key-in forgot password then invalid credentials by	Display error message.	Akshay Bhanderi	25/02/2021	Passed

	<b>Jobprovider/Jobseeker</b>				
<b>Job Provider</b>					
1	Key-in add a job to job module, logged in as <b>JobProvider</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
2	Key-in edit a job in job module, logged in as <b>JobProvider</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
3	Key-in delete a job from job module, logged in as <b>JobProvider</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
4	Key-in search attribute for Employ as <b>Job Provider</b>	Display related employee profiles	Akshay Bhanderi	25/02/2021	Passed
5	Key-ratings to rate the job seeker	Rating of the job seeker is updated	Akshay Bhanderi	30/03/2021	Passed
<b>Admin</b>					
1	Key-in delete a job from job module, logged in as <b>Admin</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
2	Key-in view the job details from job module, logged in as <b>Admin</b>	Display job details.	Akshay Bhanderi	25/02/2021	Passed
3	Key-in delete a user from user module, logged in as <b>Admin</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
4	Key-in view the user details from user module, logged in as <b>Admin</b>	Display user details.	Akshay Bhanderi	25/02/2021	Passed
<b>User profile</b>					
1	Key-in edit own profile providing valid details, logged in as <b>Jobprovider,Job seeker</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
2	Key-in edit own profile providing invalid details, logged in as <b>Jobprovider,Job seeker</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed

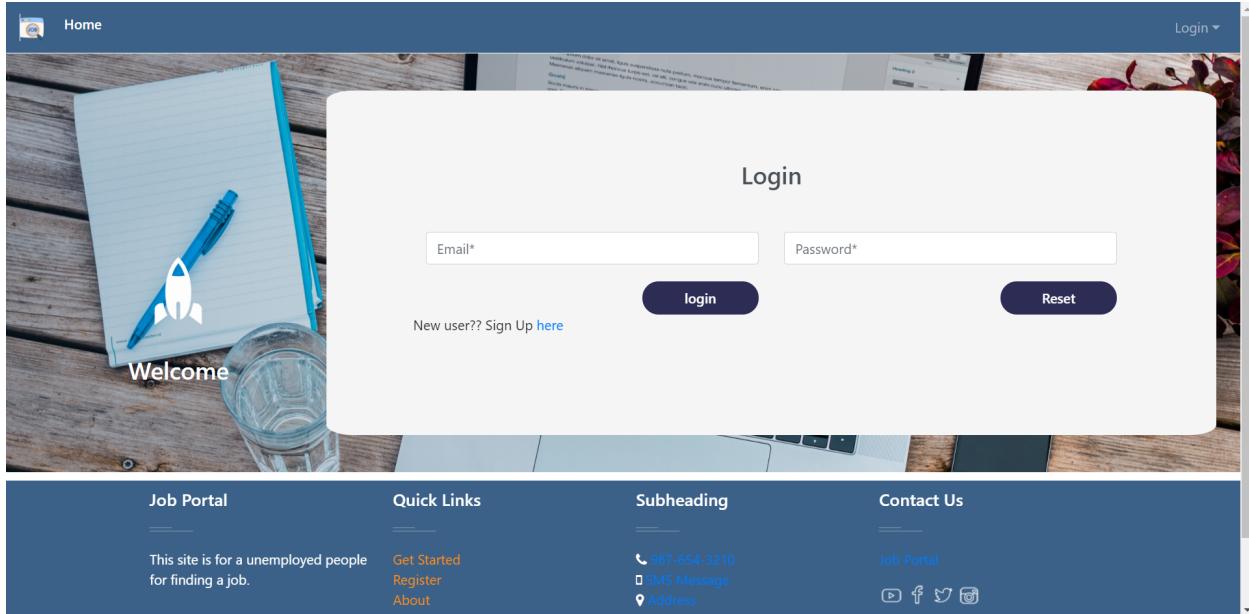

3	Key-in view own profile in user module, logged in as <b>Jobprovider,Job seeker</b>	Display profile details	Akshay Bhanderi	25/02/2021	Passed
4	Key-in delete own profile in user module, logged in as <b>Jobprovider,Job seeker</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
<b>Job Seeker</b>					
1	Key-in add resume valid details & make pdf,logged in as <b>Job seeker</b>	Pdf is created.	Akshay Bhanderi	25/02/2021	Passed
2	Key-in add resume invalid details & make pdf,logged in as <b>Job seeker</b>	Error message is displayed.	Akshay Bhanderi	25/02/2021	Passed
3	Key-in edit resume valid details,logged in as <b>Job seeker</b>	Display acknowledgement message.	Akshay Bhanderi	25/02/2021	Passed
4	Key-in edit resume invalid details,logged in as <b>Job seeker</b>	Error message is displayed.	Akshay Bhanderi	25/02/2021	Passed
5	Key- in search attribute for job ,logged in as <b>Job seeker</b>	Display related jobs from job module	Akshay Bhanderi	25/02/2021	Passed
6	Key-ratings to rate the job provider	Rating of the job provider is updated	Akshay Bhanderi	30/03/2021	Passed

## 7. Screen-shots

Home Page

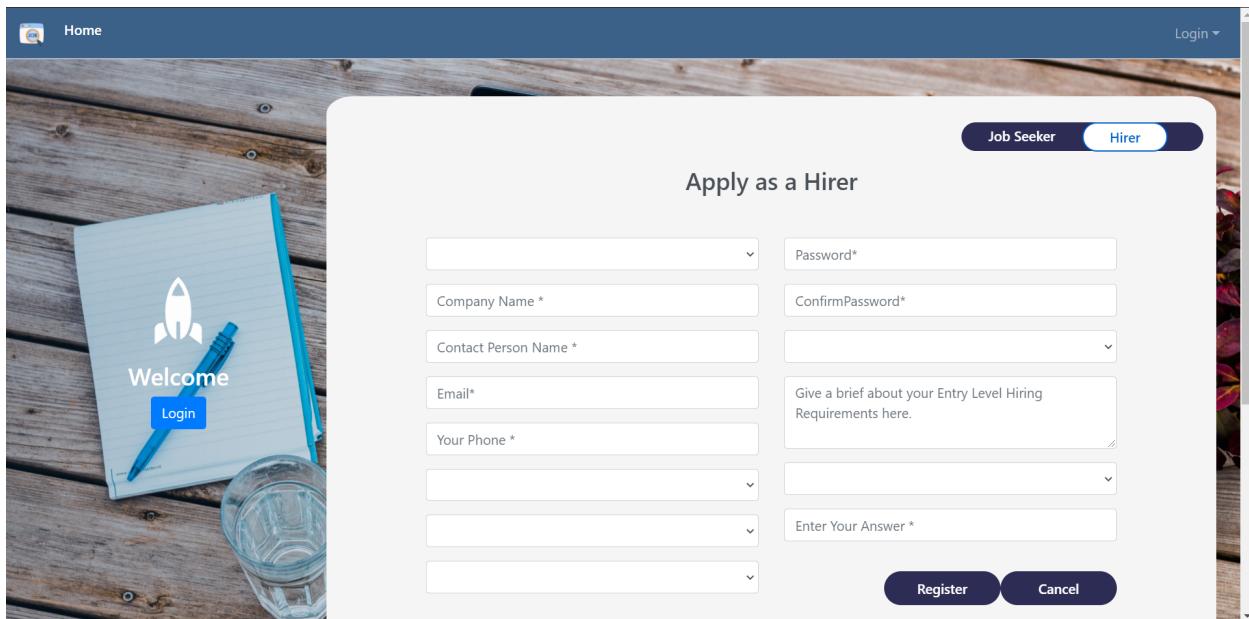

Login Page

The screenshot shows the login page of a job portal. At the top right is a "Login" button with a dropdown arrow. The main area features a "Welcome" message on the left and a "Login" form on the right. The login form includes fields for "Email\*" and "Password\*", a "login" button, a "Reset" button, and a link for new users to sign up. Below the form is a "Quick Links" section with links to "Get Started", "Register", and "About". The footer contains sections for "Job Portal", "Quick Links", "Subheading", and "Contact Us".

## Registration

The screenshot shows the registration page of a job portal. At the top right are "Job Seeker" and "Hirer" buttons. The main area features a "Welcome" message on the left and a "Apply as a Hirer" form on the right. The form includes fields for "Email\*", "Password\*", "Company Name \*", "Confirm Password\*", "Contact Person Name \*", "Your Phone \*", and a text area for "Give a brief about your Entry Level Hiring Requirements here." There are also dropdown menus and an "Enter Your Answer \*" field. At the bottom are "Register" and "Cancel" buttons.

## 8. Conclusion

Job Search Portals stands as a revolutionizing element in the sphere of recruitment. They act as a communication bridge between applicants and recruiters facilitating their requirements. This application helps organizations to have a greater exposure to the candidate pool and also job seekers facilitating wide search of jobs matching their interests. This application provides an enhanced user experience for both employer and jobseeker. It provides a user friendly interface which facilitates in reaching a wide range of audience.

## 9. Limitation and Future Extension

### Limitations

The size of the database increases day-by-day, increasing the load on the database backup and data maintenance activity. Training for simple computer operations is necessary for the users working on the system.

### Future Extensions

- There is always scope of improvements. We will enhance the quality of the system.
- We are looking to develop an android and ios version of the system. So that mobile users can also take advantage of the system.
- We will add functionality of Advertisement through which Employers can advertise job requirements on the home page.
- We want to add two divisions for job. One for One Time Job and another for regular type of job.
- We will provide courses on the website which help job seekers to improve themselves.
- We can customize home page for jobseekers as per their location.
